

ULTRASONIC TANK BASKETS AND FIXTURES

STANDARD AND CUSTOM PARTS BASKETS AND FIXTURES FOR YOUR ULTRASONIC CLEANING SYSTEM

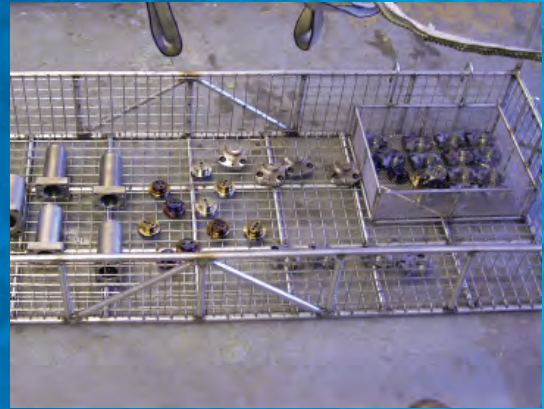

Our baskets and fixtures are designed to fit in your specific ultrasonic cleaning system and increase the efficiency of your process without sacrificing the ultrasonic cleaning effectiveness. Blue Wave designs baskets or fixtures based on the size, weight, shape, and placement of the items you clean. Our baskets and fixtures maximize the number of items that can be cleaned in each cycle. Baskets and fixtures can be transferred in and out of single or multiple tanks by hand, by overhead hoist using chains or straps, or by custom automation systems designed by Blue Wave. Contact us for details of your specific application.

Heavy-duty parts basket with corner lifting points and a basket insert with a tighter mesh for cleaning smaller parts.

The standard sized basket for a CC-1825 console cleaner can be used with or without the mesh insert pictured above.

Heavy duty custom baskets are designed to hold large and small parts. Heavy duty baskets accommodate additional weight capacity in large tank systems.

This custom fixture was built to maximize the number of brushes that were cleaned per cycle. Stacking the brushes in this fixture ensures each brush is exposed to the ultrasonic cleaning power within the tank.

This heavy-duty fixture accommodates two large rubber molds or many smaller molds depending on their size. The fixture works in conjunction with an overhead hoist when transferring the part from the clean, rinse, and rust inhibiting tanks.
