

# BLOW-OFF STATION

## A DEDICATED AND CONVENIENT WORKSTATION FOR REMOVAL OF RESIDUAL RINSE WATER

Blue Wave blow-off stations are an ideal addition for several ultrasonic cleaning processes. Blow-off stations are self contained, stainless steel units that utilize compressed air for a powerful and effective way to dry large surfaces, intricate areas and internal paths of each part.

This custom Blue Wave UC/UR/UR system with one ultrasonic cleaning chamber and two immersion rinse chambers is outfitted with a blow-off station. The blow-off station follows the left to right workflow and provides a convenient area for the removal of moisture from the cleaned parts.

Includes a detachable hose and compressed air blow-off gun with blowback prevention wand. Requires customer supplied filtered, compressed air.

A standard 2" NPT stainless steel drain fitting requires connection to a water drain.

Available options include a water hose attachment for flushing out water lines and other intricate areas. The flushing hose requires a customer supplied water source.
